FRANK'S DAHLIA GARDEN

Growers of the Finest American and European Dahlias 160 Talbot Drive Bedford, Ohio

January, 1936.

To Our Friends and Patrons, Everywhere.

Greetings:

In reply to your inquiries about our method of growing exhibition dahlias, I submit this information.

We grow dahlias in a heavy clay loam, mostly clay. Manure is a thing that we do not know what it looks like, as it is scarce and expensive. Instead we sow rye in the fall and have it ploughed under in spring. We

start planting roots May 15th and plants June 1st.
Beginning July, I broadcast steamed bone-meal between the rows and cultivate it in at once. This is repeated the beginning of August with the addition of potash. After this the rows are mulched with leaves. One pound of bone-meal and 1/2 pound of potash is

used to every six hills for both these feedings.

The plants are sprayed or dusted every week and the soil is cultivated two or three times a week until it is mulched. I pinch all plants six weeks before the show and two weeks before the date I water them, if it is necessary. This is the only watering that the

plants receive.

Be it understood that this method will not produce size. However, it is the safest way I know of, that will give me thousands of blooms and a good stock at the same time. By growing varieties that are good bloomers, I am always able to select perfect blooms for the show-room, depending more on their color and perfection than size.

To sum this all up, my method can be stated briefly: I give my dahlias 365 days a year, work hard and try to use my head. I am sure that you can do the same

thing if you want to.

I thank you for your generous patronage in 1935. Your business is appreciated and I trust that you will favor me with a share of it this season, for which I thank you in advance.

> Sincerely, FRANK J. PARENICA.
